AI System	What is it	Major Thing People Get Wrong
ChatGPT/ GPT-3.5	This is the free version of ChatGPT that came out in November. It is very fast and pretty solid at writing and coding tasks.	**It is not connected to the internet. If you ask it o look up anything since late 2021, it will get those things wrong. Doesn't do math**
ChatGPT/ GPT-4	New. Currently available to paying customers. Disturbingly powerful at times, it is the most capable model. Slow. Does a lot.	**It is also not connected to the internet, though it is better at not making stuff up. Does better at math.**
ChatGPT/ Plugins	In early testing, this is a model of ChatGPT that can connect with plugins to all sorts of internet services. New and rough edges	**As a system in early testing, its capabilities are not completely clear, but will allow ChatGPT to connect to the internet**
Bing AI	Connected to the internet. Extremely powerful. Somewhat weird. Creative mode uses GPT-4, the other modes (precise, balanced) don't seem to	**Being in the wrong mode will get you bad results (Creative mode is most full featured). AI with personality.**
Google Bard	Current model is not very good. Future models may be very powerful.	**Since it is Google, expecting it to not lie. It makes stuff up more than other models.**
Anthropic Claude	Equivalent to GPT-3.5, but with a model that feels much more sane to use. Less popular	**Also not connected to the internet**
